FISCAL IMPACT STATEMENT

LS 6364

BILL NUMBER: HB 1399

DATE PREPARED: Nov 29, 2000

BILL AMENDED:

SUBJECT: Community Corrections Goals and Statistics.

FISCAL ANALYST: Mark Goodpaster

PHONE NUMBER: 232-9852

FUNDS AFFECTED: X **GENERAL**
DEDICATED
FEDERAL

IMPACT: State & Local

Summary of Legislation: This bill requires state and locally operated community corrections programs to report to the executive director of the Legislative Services Agency the race, ethnicity, and communicable disease carrier status of offenders in the programs. It adds the reintegration of offenders into the community as a purpose for the establishment and operation of community corrections programs. It amends the definition of community corrections to include programs that reintegrate offenders into the community. (The introduced version of this bill was prepared by the Corrections Matters Evaluation Committee.)

Effective Date: July 1, 2001.

Explanation of State Expenditures: This bill adds the requirement that the Department of Correction (DOC) compile information on the offenders' race and whether they are infected with either tuberculosis in a communicable stage or another dangerous communicable disease. Concerning race and ethnicity, the Department already compiles information on six racial and ethnic categories -- White, African American, Hispanic, Native American, Asian and Pacific Islanders, and Others.

Concerning carrier status, the Department also screens offenders for tuberculosis and certain types of venereal diseases, including syphilis, gonorrhea, and chlamydia. DOC also screens for HIV upon request and for Hepatitis B or C if there is a specific clinical indication. Consequently, the additional cost to the Department of compiling and reporting the information should be minimal.

The Department would also need to redesign the quarterly reporting forms that the community corrections agencies complete and submit to the Department.

Explanation of State Revenues:

Explanation of Local Expenditures: The requirement to compile information on demographic

characteristics of the offenders in community corrections programs will require the local programs to reconfigure their information databases to report this information to the Department of Correction. While some agencies have automated their information systems, others compile this information manually.

Concerning carrier status, community corrections staff generally screen offenders for tuberculosis if the offenders will be placed in a residential program. Five community corrections agencies have residential programs and 15 community corrections agencies have day reporting programs. In at least some of these counties, the local health department performs the test. Staff also indicates that under current practice, if medical histories are not included in a pre-sentence investigation, staff depends on offenders to report their disease carrier status. Requiring health information on all community corrections offenders could increase the cost of reporting information to the Department of Correction if more than self reporting of health histories is needed.

As of November 2000, 59 counties operated community corrections programs and received state support. DOC reports that 19,568 offenders were in some type of community corrections program as of March 31, 2000.

Explanation of Local Revenues:

State Agencies Affected: Department of Correction.

Local Agencies Affected: Community corrections agencies.
